Adobe Lightroom Adobe Lightroom is a "light" version of Photoshop for photo editing. Its basic functions are similar to those of Photoshop, but it lacks some of the advanced features, most notably content-aware masks and automatic exposure adjustment (AEA). Instead, Lightroom works more directly with a database and offers powerful editing tools like RAW conversion and excellent image management features. It is similar to Apple's popular Photos app and is built into iOS and macOS. Adobe's Lightroom website (www.adobe.com/products/lightroom) includes tutorials that will guide you through learning the basics of using Lightroom, as well as more advanced features. You can also learn how to use Lightroom through its own dedicated tutorials. You can learn Lightroom using several other social media sites, such as the social network Tumblr (www.tumblr.com) and the photo-sharing social site Instagram (www.instagram.com). Instagram-specific tutorials are often tagged with the appropriate hashtag, such as #photoshop for Lightroom.

Microwave-assisted microwave-assisted extraction of lipids from *Dioscorea officinalis* rhizomes. The microwave-assisted microwave-assisted extraction (MAWME) of lipids from *Dioscorea officinalis* rhizomes was investigated and compared with the traditional solvent extraction. MAWME was carried out at the microwave power of 100, 200, 300, 400, 500, 600, 700, 800, 900 W; at the extraction temperature of 40, 50, 60, 70, 80, 90, 100, 110, 120, 130, 140 degrees C, and at the extraction time of 3, 5, 8, 10, 15, 30, 40, 50 and 60 min, respectively. And the influences of five factors including microwave power, extraction temperature, extraction time, solvent to the original mass ratio, and mass ratio of the substrate to solvent to total weight of MAWME on the yield of extracted lipids were evaluated by three-factor, five-level Box-Behnken design. Under the optimal conditions, the extraction yield of lipids was 18.94% in comparison with 22.88% of solvent extraction. The analyses of the extractability of lipids by MAWME indicated that the major lipids in *D. officinalis* rhizomes could be extracted by MAWME in petroleum ether.

Q: How to access Variable which is accessible from function in javascript I am new to JavaScript and struggling to see a way to access a variable inside a function. Here is what I have // functions function myFunc() { var var1; return var1; } var myVar = 'someValue'; var myVar2 = myFunc() console.log(myVar); // How can I access the "myVar" from the "myVar2"? I want to be able to access myVar from within myFunc() since all the variable that are used in my function are outside of it. I tried passing the function as a parameter and calling it, but the result is I couldn't access the variable either. Any suggestions on how to do that? A: Accessing functions using variable is done using Function.prototype.bind Try this var myVar = 'someValue'; var myVar2 = myFunc.bind(undefined)
